

## **Aurora** *Perry*

At four years old, Aurora complained of pain in her arm, ran fevers frequently and her mother noticed she had swollen lymph nodes. On October 4, 2023, Aurora was diagnosed with B-Cell Acute Lymphoblastic Leukemia. She began treatment at Atrium Health Levine Children's Beverly Knight Olson Children's Hospital and went into remission in January 2024, although she will continue treatment until January 2026.

Ileana, Aurora's mom, says, "During our time at the Children's Hospital, we were overwhelmed by the unwavering dedication and compassion shown by the nurses and doctors who made every moment brighter with their kindness and expertise. Their heartfelt care and support turned a challenging experience into one filled with warmth and hope."

Aurora is now five years old and has a vivid imagination. She loves playing with her kitchen set, spending time outdoors, and having fun with her sister.
